i-Reporter

The paperless solution for reporting with iPad, iPhone, and Windows tablet.

Main Features & Function i-Reporter

Use Existing Paper Form

Users can use the existing paper form without any changes and moved it directly into an electronic form for an iPad or a Windows tablet.

Users can move to digitalization and paperless system without losing the advantage of handwriting documents.

Native App

i-Reporter is a Native Application for iOS/Windows, it's a very smooth operation and available to use under the off-line circumstance.

Users can prevent input mistakes or omissions using Input settings.

Link with External System

Web API module for coordination with external system. User can get information from i-Reporter system and link into external system.

Document Management

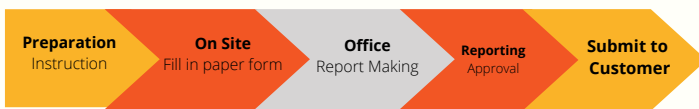

With the management function, users can browsing and view the reference documents such as PDF, EXCEL, WORD, Picture, HTML document, Movie, and 3D model. No more carrying around heavy paperwork.

QR Code Generation

Generate a QR code using the cluster values. QR code can be generated and displayed into an image cluster.
